文献管理神器-Endnote X9

**EndNote X9**  
*Research Smarter*

# 你是否在日常科研过程中经常碰到以下的困惑：

各种来源文献保存**杂乱无序**，无统一有效管理的位置，面对纷繁冗杂的文献，经常找不到有效的文献。

做课题或撰写论文时，我们需要对文献进行研读，或借鉴已有的文献进行分析，讨论。但因保存文献量较大，形式繁杂，感觉**无从下手**。

写论文的时候，**参考文献格式处理**令人头疼不已，一不留神错误百出，在编辑参考文献格式上浪费大量时间精力，结果可能会被编辑质疑文章的质量。

# ENDNOTE 可以帮助您.....

- 建立**个人文献图书馆**
- 从数据库检索文献并快速导入至个人文献图书馆
- 帮助寻找文献全文

- **管理不同来源的中英文文献**
- 将数据库的信息资源与工作小组成员共享
- 根据需要创建组，去重、排序、分析、阅读笔记，随时更新，编辑记录

- 撰写论文时，迅速找到相关的文献、图片、表格，将其自动插入论文相应的引用位置
- 准备投稿时，自动按照投稿期刊的要求将文中文后的**参考文献格式化**，提高论文写作效率

A purple arrow points from the '获取参考文献' button in the toolbar to the '获取参考文献' button in the browser's address bar. Another purple arrow points from the '获取参考文献' button in the browser's address bar to the '获取参考文献' dialog box. The dialog box is titled '获取新的参考文献' (Get new references) and contains a form for entering reference information. The form includes fields for 'Author', 'Title', 'Year', 'Journal', 'Publisher', 'Volume', 'Issue', 'Pages', 'Start Page', and 'Errata'. The 'Author' field is filled with 'Sheng Guo; Chun Ng; Jian Lu; and C. T. Liu'. The 'Title' field is filled with 'Effect of valence electron concentration on stability of fcc or bcc phase in high entropy alloys'. The 'Year' field is filled with '2011'. **Exploration and Development of High Entropy Alloys for Structural Applications**

Daniel B. Miracle\*, Jonathan D. Miller, Qing N. Song, Christopher Woodward,

Abstract: We develop a strategy to design and evaluate high-entropy alloys (HEAs) for structural use in the transportation and energy industries. We give HEA goal properties for low (≤150 °C), medium (≤450 °C) and high (≥1,000 °C) use temperatures. A systematic design approach uses palettes of elements chosen to meet target properties of each HEA family and gives methods to build HEAs from these palettes. We show that intermetallic phases are consistent with HEA definitions, and the strategy developed here includes both single-phase, solid solution HEAs and HEAs with intentional addition of a 2nd phase for particulate hardening. A thermodynamic estimate of the effectiveness of configurational entropy to suppress or delay compound formation is given. A 3-stage approach is given to systematically screen and evaluate a vast number of HEAs by integrating high-throughput computations and experiments. CALPHAD methods are used to predict phase equilibria, and high-throughput experiments on materials libraries with controlled composition and microstructure gradients are suggested. Much of this evaluation can be done now, but key components (materials libraries with microstructure gradients and high-throughput tensile testing) are currently missing. Suggestions for future HEA efforts are given.

**Supplementary table 1 | Equations describing the ‘Likely water’ cluster hull and cluster overlaps in the multidimensional feature-space.**

These equations describe the ‘Likely water’ cluster in the multidimensional feature-space. By definition, part of this cluster contain pixels that are not water, and request additional processing steps to be properly assigned. The method section provides details about the usages of this equations within the expert system classifier.

# III. 如何快速分析挖掘文献信息？

## 3. 一键直达文献全纪录页面及相关记录页面

The screenshot displays the EndNote X9 software interface. The main window shows a 'Web of Science' article page. The article title is 'A fracture-resistant high-entropy alloy for cryogenic applications'. The authors listed are Gludovatz, B.; Hohenwarter, A.; Catoor, D.; Chang, E. H.; George, E. P.; and Ritchie, R. O. The article is from SCIENCE, volume 345, issue 6201, pages 1153-1158, published in September 2014. The article type is 'Article'. The abstract mentions that high-entropy alloys are equiatomic, multi-element systems that can crystallize as a single phase, despite containing multiple elements with different crystal structures. A rationale for this is that the configurational entropy contribution to the total free energy in alloys with five or more major elements may stabilize the solid-solution state relative to multiphase microstructures. The article was examined in a five-element high-entropy alloy, CrMnFeCoNi, which forms a single-phase face-centered cubic solid solution, and found it to have exceptional damage tolerance with tensile strengths above 1 GPa and fracture toughness values exceeding 200 MPa.m<sup>1/2</sup>. Furthermore, its mechanical properties actually improve at cryogenic temperatures; we attribute this to a transition from planar-slip dislocation activity at room temperature to deformation by mechanical nanotwinning with decreasing temperature, which results in continuous steady strain hardening.

The 'Citation Network' section shows 636 citations in the Web of Science core collection, with a citation frequency of 648 across all databases. There are 50 references cited in the article. The 'View Source Record' button is highlighted in a blue box, and a purple callout points to it with the text 'View Source Record 一键直达文献全纪录页面'.

- 与Web of Science Core Collection结合起来使用，效果更好！
- DOI号 (Digital Object Identifier)
- 其他全文数据库网站  
PubMed LinkOut (U.S. National Library of Medicine)
- 可开放获取的URL地址

因单位系统不同而有不同设定，请与单位馆员联系确认

# V. 资源共享——Share你的分组

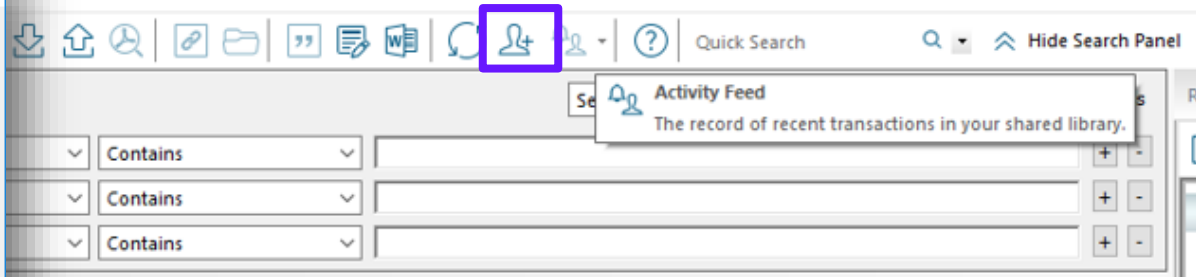

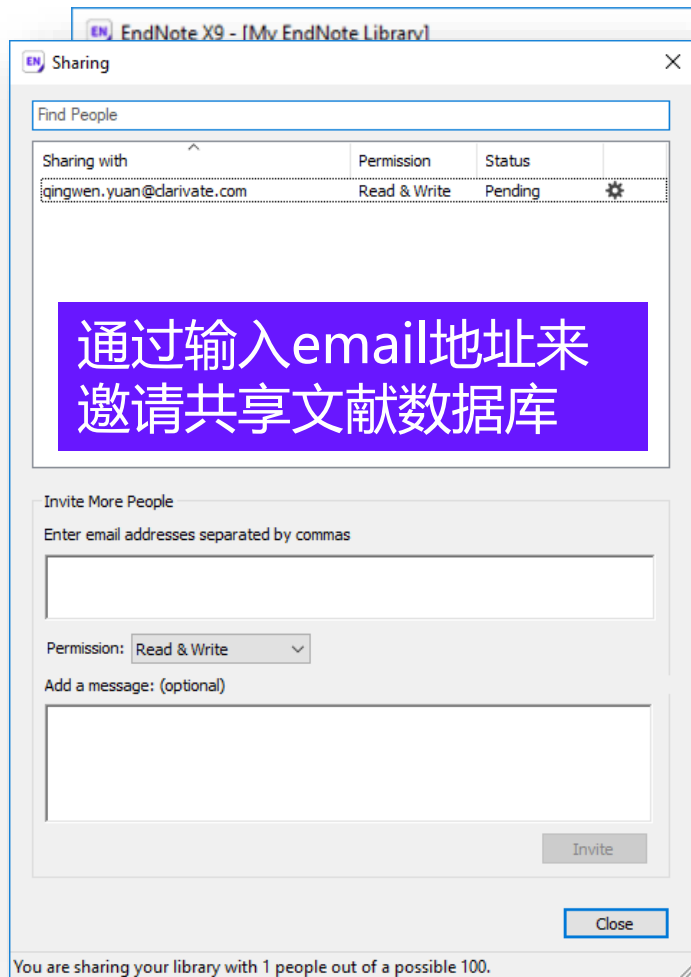

- 可与你的团队成员分享文献分组资源，并且在共享时可限定访问权限为“只读”或“读写”。

通过输入email地址来邀请共享文献分组

在共享时可限定访问权限为“只读”或“读写”

## VI. 资源共享——Share你的图书馆

- 小组成员共享14人增加到99人。大型团队协作与研究共享可添加文献、注释、引用文献并可享受无限制的云端存储空间。

- 最多可与**100位**成员共享一个文献数据库！

注意：Notice: 为了共享方便阅读文献，共享文献数据库的成员必须有EndNote注册号。输入email地址即可登录EndNote。

# 论文写作中你是否发现？

- ❖ 写论文时，手动插入参考文献的工作很麻烦。
- ❖ 因调整论文架构而随之带来的参考文献顺序调整让工作量剧增。
- ❖ 文后参考文献格式很复杂，撰写论文时要注意很多细节。
- ❖ 不同投稿期刊对于参考文献格式要求不同，每次换投期刊就要面临格式调整的大工程。
- ❖ 不准确的参考文献格式会被期刊编辑拒稿。

Reversible modulation of quantum dots

<sup>1</sup> Beijing National Laboratory for Condensed Matter Physics, Institute of Physics, Chinese Academy of Sciences, Beijing 100190, China

KEYWORDS: Quantum dots, electron transfer, electrochemistry

ABSTRACT: As the most potential materials for bioimaging and solar cells, the strategies of precise manipulation over the photoluminescence (PL) of single quantum dots (QDs) have evolved over years and should not be underestimated. This PL modulation of single QD is

Quantum dots (QDs) are promising materials for future optoelectronic devices. Ex-cited electron-hole pairs in QDs recombine radiatively by emitting photons or non-radiatively through Auger recombination or trap-assisted processes. The later quantum yield or blinking of the QDs. It is important to increase quantum yield or blinking in applications such as biological imaging and quantum information processing which can greatly benefit from long-lasting and non-blinking emitters. On the other hand, nanostructures containing QDs with reversible and controllable modulation of PL intensity have received much scientific and technical interest because of their potential applications in many fields such as smart windows, nanosensors, optoelectronic devices and memory elements. The precise control over the PL of single QDs needs to be further improved before the QDs can be put into practical applications.

6,12-Diphenyldibenzo[b,f][1,5]diazocine as an Electron-Capture Agent: EfficientMechanistic Probe for SET Processes and Reagent for the OxidativeDimerization of Benzylic Organometallics

John J. Eisch,\*[a]Kun Yu,[a]and Arnold L. Rheingold[b]

Keywords: Electron transfer / Reduction / Lithium / Dimerization / Transannular reactions

In the present study, 6,12-diphenyldibenzo[b,f][1,5]diazoc-ine, which X-ray diffraction measurements have now shownto possess a tub-shaped, eight-membered central ring, hasbeen treated with sodium or lithium metal at 25 °C in THF, in an attempt to form the planar, Hückel-aromatic dianion bythe addition of two electrons to the central diazocine. Hydrol-ysis of such an aromatic dianion should have led to the iso-meric 5,12- or 5,6-dihydro derivative of the original di-azocine. In actuality, the only product obtained

Measurement of the elastic properties and intrinsic strength of monolayer graphene

#### \*摘要:

We measured the elastic properties and intrinsic breaking strength of free-standing monolayer graphene membranes by nanoindentation in an atomic force microscope. The force-displacement behavior is interpreted within a framework of nonlinear elastic stress-strain response, and yields second- and third-order elastic stiffnesses of 340 newtons per meter ( $\text{N m}^{-1}$ ) and  $-690 \text{ N m}^{-1}$ ,
